ARCHITEKTURKERAMIK MADE IN GERMANY

In responsibility for our environment and future generations, sustainability is of greatest importance as well as resource-saving production and the economical use of raw materials and energy.

- Ceramic tiles are extremely durable, hygienic and easy to clean. This makes it a particularly resource-saving product.
- Our tiles contain over 70 % clay. This main raw material is mined in the immediate vicinity of our production site. In this way, environmental pollution caused by the transport of raw materials is minimized and a regional product of the highest quality is created from the best clay of the Westerwald region.
- The renaturation of former clay pits of our suppliers is guaranteed by high reclamation reserves of the mining companies.
- We only work with raw material suppliers who are certified according to strict German environmental regulations.

- We manufacture with state-of-the-art production facilities in accordance with the highest sustainability and environmental standards:

- Closed raw material cycle
- Return of the residual materials to the material cycle
- Complete waste water recycling
- Heat recovery concept and thermal recycling
- Exhaust gas cleaning in combination with energy-efficient firing kilns
- Energy management according to ISO 50001
- Member of the initiative for climate-friendly medium-sized companies

- GIGA-Line tiles are packed precisely and without waste in cardboard strips made from recycled paper. This reduces paper consumption and packaging waste.
- Located in the middle of Germany, next to highway "A3" we have excellent transport links. This ensures reliable and speedy delivery in all directions.
